

12-752: Data-Driven Building Energy Management

Quiz#1

November 10, 2016

1 Python test

Find the errors (and circle them):

```
d = [] #creating empty dictionary
print('Empty dictionary:')
print(d)

d['author'] = 'Shakespeare' #adding an item to the dictionary
print('Dictionary with one element')
print(d)

#adding more items:
d['year'] = [1596,1954]
d['title'] = 'The merchant of Venice'

#Accessing items in dictionary:
print_string = d['title'] + ' was written in the year ' + str(d['year'])
print(print_string)
```
